

Scenarios

Scenario 1

Design and develop a web-based system that supports learning activities, tracks student progress, manages assessments, and improves access to quality education for institutions with limited resources.

The system should help educators monitor performance while ensuring inclusive and equitable learning opportunities.

(SDG 4 – Quality Education, SDG 10 – Reduced Inequalities)

Scenario 2

Build a web application that helps community-level healthcare centers manage appointments, share verified health awareness information, and maintain basic patient records while improving accessibility and efficiency of healthcare services.

The solution should focus on improving well-being and promoting preventive care within communities.

(SDG 3 – Good Health & Well-being, SDG 9 – Industry, Innovation & Infrastructure)

Scenario 3

Create a collaborative web platform that allows organizations, universities, or clubs to plan and manage sustainability-focused initiatives, track resources, assign tasks, and measure social or environmental impact over time.

The system should encourage responsible resource usage and long-term sustainable development.

(SDG 12 – Responsible Consumption & Production, SDG 13 – Climate Action, SDG 17 – Partnerships for the Goals)
